- Sitting in your chair.
- Slide your affected leg out in front of you – it can be helpful to place your foot on a plastic bag so that it slides easier with less resistance.
- Return to starting position.
- Repeat 10-12 times or as comfort allows.
- You may also find it helpful to help move your affected leg by placing your good leg over it and using it to pull your affected leg backwards.

This type of exercise is a 'range of movement exercise' therefore it is recommended that you do these exercises regularly throughout each day.

Allow pain to be your guide. You might find it easier to use either ice or heat during and/or after doing these exercises.
